

The new Access Control System by the Gretsch-Unitas Group of Companies

Individual solutions to your requirements !

- Safety for a single door or several ones
- For individual or networked door systems
- Online or stand-alone event query/monitoring
- Access authorisation via card, finger print or combination of the two

Stand-alone card system

Control unit in the secured area and contactless card reader in the unsecured area for more safety and convenience.

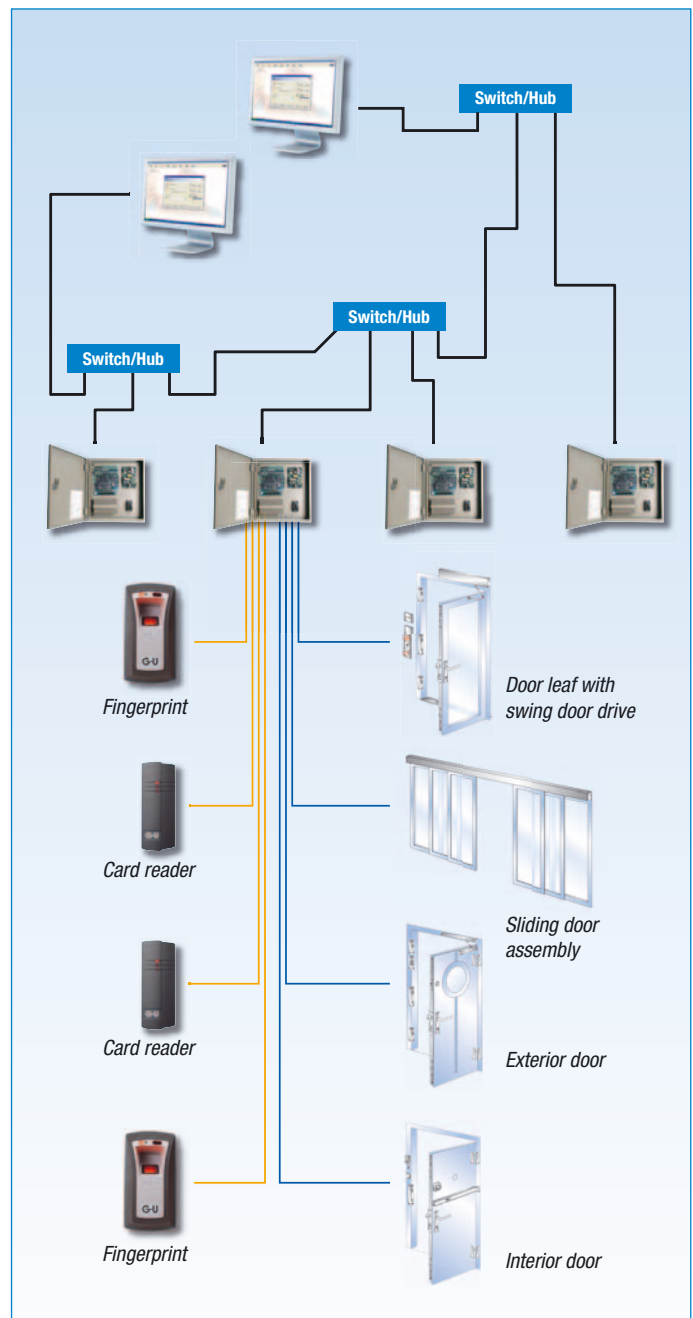

- Simple storage and deletion of access authorisations via numeric keypad and individually programmable master card
- Available for RFID compliant smartcard technologies ASK, PSK and MIFARE
- The control unit can also be used as exit reader.

Networked system

The combination of control unit in the secured area and contactless card reader and/or fingerprint reader in the unsecured area provides optimum security and convenience.

- The evaluation unit allows for the connection of max. 4 readers independent from each other
- The software administrates the data in the central PC and sends them to the self-sufficient control units
- The software allows to issue, extend, restrict and withdraw access authorisations
- Depending on the safety requirements of the location, access is granted either upon card or fingerprint identification, or upon verification of both card and fingerprint
- The evaluation units are either integrated in the Local Area Network or connected to the central PC via the system's RS-422 bus
